

What I already know...

That an algorithm is a set of instructions that are given to make something move/operate.

How to combine commands to follow a route.

How to describe and write algorithms to complete specific tasks.

Code Breakers

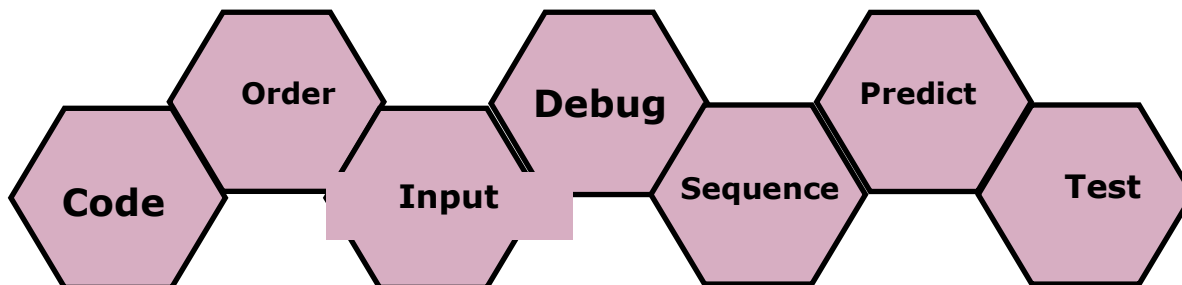

Children will use a coding program to input an algorithm and reprogram any given errors, also known as debugging.

I will learn...

- ⇒ To predict the outcome of a program based on the code that has been inputted.
- ⇒ To identify and correct errors in a code (debug)

Key Vocabulary
